Our Training Courses

ROLE SPECIFIC TRAINING

Train as a Squirro Front-End Developer or a Squirro Engineer. Our role specific training and certification options will provide you with all the necessary skills for that specific role.

SOLUTION BASED TRAINING

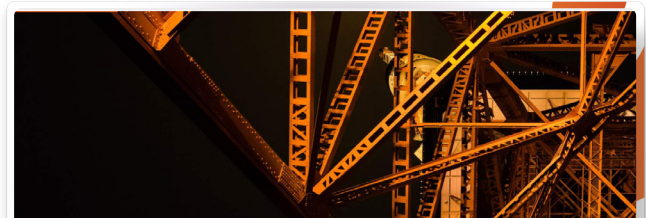

Learn about our Squirro AI Studio or our Cognitive Search Solution. With a solution based training course you can learn about all of their features and functions.

LEARNING AND COLLABORATION WORKSHOPS

Peer learn and collaborate with experts. Exchange ideas in the forum and in our expert led, virtual skill-based round table workshops.

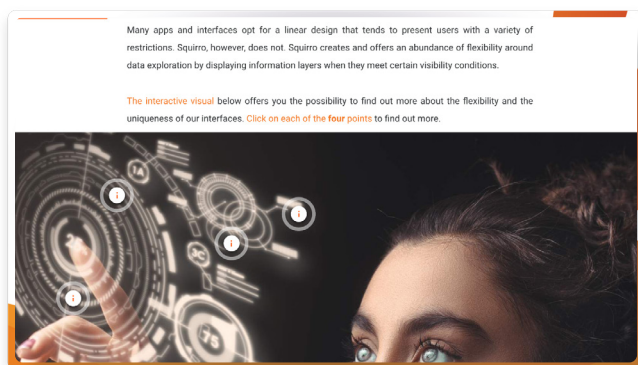

1 SKILL ACQUISITION

Squirro Architecture is an example of a lesson that has been taken from the Squirro Front-End Developer course; one of the many courses on offer, for those training with Squirro. The lesson exemplifies the carefully thought out approach that has been taken to each of the lessons within the Squirro Academy and highlights the emphasis that has been placed on drawing our trainees into our narrative and our world. Our lessons cover a variety of topics that are key to the features and functionalities of the Insights Engine and the solutions we offer. They focus on enabling skill acquisition and aim to ensure that our partners and colleagues are set up for independent project success.

Architectural Thought

Squirro is a software provider and as a software provider our narrative around architecture flows to a definition that embeds itself in the most important aspects of the internal design of our software system. A rooting that also lead us to a definition and understanding that describes the fundamental organisation of the system or the way in which primary weight-bearing components are wired together.

Many apps and interfaces opt for a linear design that tends to present users with a variety of restrictions. Squirro, however, does not. Squirro creates and offers an abundance of flexibility around data exploration by displaying information layers when they meet certain visibility conditions.

The interactive visual below offers you the possibility to find out more about the flexibility and the uniqueness of our interfaces. Click on each of the four points to find out more.

2 INTERACTION

Each lesson contains a variety of different interactive activities which both promote and encourage self-directed peer learning. Knowledge checks, dialogues and snippets of code provide practical evaluation opportunities and each trainee ends their training course with a corresponding skills-based certification assignment that is marked and discussed, in detail.

ABOUT SQUIRRO

Businesses capitalize on new opportunities, improve client relations, and optimize decision-making capabilities using Squirro's vertical-specific Augmented Intelligence solutions, which combine human intelligence with powerful AI. An Insights Engine at its core, Squirro delivers contextualized insights from your most relevant data sources and displays them directly, via workbench integrations, or through self-service applications.

Squirro works with global organizations, primarily in the Financial Services, Insurance, Telecommunications, and Manufacturing industries. Customers include Bank of England, Standard Chartered, ING, Brookson, Ninety-One and Candriam. Founded in 2012, Squirro is currently present in Zürich, London, Munich, New York, and Singapore. Further information about AI-driven business insights can be found at squirro.com
