

SquirroGPT: Enterprise-Ready Generative AI

Data security and privacy

ENTERPRISE REQUIREMENTS FOR GENERATIVE AI

SquirroGPT allows organizations to upload and / or connect* their documents and data sources. This enables generative AI functionality on the information that matters to your organization. SquirroGPT works across various data types and formats from siloed internal data sources such as Microsoft Office, Dynamics, Sharepoint, Google Apps, Salesforce, etc.

*In the free trial, users can manually upload their documents. Users of the professional and enterprise versions can use various connectors on top of the manual upload capability.

ISO-27001 CERTIFICATION AND ENHANCED DATA SECURITY

Squirro is ISO-27001 certified, ensuring enhanced data security and regulatory compliance. The certification guarantees proactive risk management and ongoing improvement in information security practices. Squirro handles personal and sensitive data with utmost protection and complies with privacy regulations. SquirroGPT is integrated with Squirro's Information Retrieval (IR) stack, a proven enterprise-ready technology stack that guarantees compliance with enterprise-grade requirements.

SECURITY BEST PRACTICES AND THIRD-PARTY AUDITS

Squirro follows security best practices for handling customer data transfer and storage, regularly audited by third-party (Cobalt) with penetration tests. Squirro guarantees that no customer data is used for analytics purposes without explicit permission or request from the customer.

LARGE LANGUAGE MODEL (LLM) INTEGRATION AND FLEXIBILITY

SquirroGPT is LLM-agnostic, meaning it can work with any LLM of the customer's choice. The free trial and the URL based website-chat versions of SquirroGPT are currently using the API of OpenAI* (GPT3.5). Due to being connected via API, no customer data is used by OpenAI for training purposes to improve the LLM. The Professional and Enterprise versions of SquirroGPT allow connection via the Azure OpenAI API, which comes with a variety of additional security standards** and ensures no data is sent to OpenAI. SquirroGPT thus offers the highest security standard related to the use of generative AI currently available.

*For more information on OpenAI's API data usage policies, visit: <https://openai.com/policies/api-data-usage-policies>

**For more information on the Azure OpenAI API additional security standards, visit:

<https://azure.microsoft.com/en-us/products/cognitive-services/openai-service#security>

DEPLOYMENT OPTIONS

Squirro offers deployment flexibility to ensure every organization gets the right solution tailored to their needs. The free trial of SquirroGPT is hosted on Squirro's public cloud, while the Professional* version is hosted on a private cloud. The Enterprise version can be deployed on Squirro's public or private cloud, or on organizations' own private cloud.

*For more information on the packages, visit: <https://squirro.com/pricing/>

DATA DELETION AND PARTNERSHIPS

When terminating a subscription, Squirro retains customer data for 30 days before permanently deleting it, allowing for subscription resumption if desired.

CLOUD AVAILABILITY AND DATA LOCATIONS

SquirroGPT is currently hosted across all regions of Hetzner Cloud with servers located by default in Germany. Customers interested in hosting SquirroGPT on AWS, Microsoft Azure, or any other cloud vendor, can reach out to us via email gpt@squirro.com for more details.

SECURE INTEGRATION AND DATA CONNECTORS

Besides being available as a standalone application, SquirroGPT can be securely integrated into existing systems and workbenches with all the necessary data connectors. It ensures data privacy and security during integration, respecting enterprise's access right controls (ACL)* to any document. ACLs are implemented on a connector basis, ensuring that only authorized personnel can access the information.

*Entitlement handling is available in the enterprise version and not included in the self-service package.
